## TERA Ohmmeter TOM 100

### Item Number: 866.100.0

With our *TERA*-Ohmmeter TOM 100 you get a low cost Instrument to test the surface resistance from Floor - and Table materials.

The measure electrode is a 100mm x 100mm plastic plate with aluminum angle with conductive rubber strips in distance from 100mm.

With the TOM 100 can easily be made reproducible measurements, standard-compliant measurements are possible with the TOM 600 from our house. The device measures surface and leakage resistance from  $10^3$  Ohm up to  $10^{12}$  Ohm.

The result is displayed by 10 LEDs.

The measure voltage is 100V!

The internal resistance is 100k $\Omega$ , this is why a switchover of the measuring voltage is not required!

With the included measuring electrode with additional 2 kg weight you can executed at any time reproducible measurements.
