

Introduction

Oxygen gas detector, Oxygen gas monitor, Portable gas detector, Gas detector supplier

Oxygen O2 portable gas monitor

OC-904 portable oxygen O2 gas detector used to detect the oxygen gas concentration with imported electrochemical sensor. Many different working place existing the Oxygen gas will need to use this gas alarm, usually including the underground safety alarm, oxygen concentration inspection in industrial environment or lab research, and other environment need to inspect the O2 gas concentration. The normal measuring range is 0~30%vol, with two-stage alarm function. LCD dot matrix display the each parameter, support both English and Chinese operating menu. Powered by the big capacity rechargeable battery which can support for a long working time. With the back clip, easy to carry when working indoor / outdoor. Also could be connected with the external pump, used to inspect the gas concentration in narrow area and underground.

Features:

Resolution: 0.01%vol

Display: LCD display the gas type, gas concentration, concentration unit, time, model, battery status, alarm status, etc.

Optional data storage: the capacity of 100000 group data, could upload to the computer.

Working time: More than 10h.

Explosion-proof Grade: Exia II CT4

Protection Grade: IP66

Working temperature: -20°C~50°C

Working humidity: 0~95%RH(non-condensing)
