

# 3-D ULTRASONIC ANEMOMETER- THERMOMETER Model : DA-700

*SONIC's Ultrasonic can measure 3-D Wind Velocity and Temperature in fast response*

## Applied Example

- Measurements of turbulent energy transport (heat and momentum flux)
- Wind observations in the wind tunnels, buildings and on the bridges.
- Flow monitoring in a clean room

## Features

- ◆ Digital processing using DSP provides high reliable data
- ◆ Ultrasonic can measure minimum winds from 0m/s without moving parts
- ◆ SONIC's algorithm is not affected by temperature change
- ◆ Lightning protection has been enhanced by selecting surge protective devices
- ◆ Added operation of 3-sec/arbitrarily averaging and elevation angle calculation
- ◆ Arbitrarily set-up data output of serial and 8ch analog signals
