

StaticString® Part # SS2000-72 (72 ft./22 meters)
Part # SS2000-1K (1,000 ft.0 / 304.8 meters)

Roll Part # SS2000-72

Spools – Two Options
Part #SS2000-1k

Blue

White

Availability:

Roll = 72 ft. (22 meter)

Spool = 1,000 ft. (305 meter)

Composition:

Material: Polyester fibers and high grade stainless steel

Diameter = 2 millimeters

Product Description:

This string is an ionizing cord that has embedded conductive stainless steel micro-fibers. These micro fibers create thousands of points to allow a static charge to ionize and flow to ground. This particular product provides clean performance with no oxidation, copper contamination or scratching with a soft touch.

Application:

To install, simply ground the string to the bare metal of the machine and drape the length across the surface to be neutralized. Adjust the distance from the charged sheet or web from direct contact to up to two inches away until you get the optimum static neutralization. Place string either under or over a web or sheet; can be used in multiple locations wherever static is a problem.
